# Results Ledger & Grading Standard

How every recommendation will be recorded, graded and shown. The record starts at launch, and no results are shown or invented before then.

INSIDE

- Six recordkeeping rules
- What a ledger row contains
- How to read any record
- What the public scoreboard will show

Letter · printable | v1.0 · November 2026 | Free · Education only

**STATUS: PRE-LAUNCH**

No recommendations have been published, so there are no results to show, and none are invented here. The row below is a made-up format example.

> A record is only worth trusting if the rules for keeping it are written down **before** the first result. These are ours.

## 1 Six recordkeeping rules

01
### Timestamped
Every recommendation is recorded with its exact available price and time.

02
### Graded at our line
Results are shown at the recommended line, not a later, more favorable number.

03
### Nothing deleted
Published losing picks stay. Corrections remain visible.

04
### Consistent settlement
Pushes, voids and partial settlements are graded the same way every time.

05
### Separate records
Free, premium, test and research picks are never mixed. Backtests are never combined with live results.

06
### Independent grading
We use an independent grading and data service when practical.

## 2 What one ledger row contains

| Field | Example (made-up) |
|---|---|
| Recommendation ID / date | EX-0001 · illustrative |
| Market and side | Away Team +3 · spread |
| Published price and time | -105 · 10:42 AM PT |
| Verdict and stake | Bet now · 0.75 units |
| Closing price | -115 |
| CLV | +2.27 pts (took -105, closed -115) |
| Result at published line | Pending |
| Audit note | To be written after settlement |

## 3 What the public scoreboard will show

**Performance**
Units won or lost · ROI · win rate with context · average odds

**Process**
Closing-line value · maximum drawdown · sample size

**Breakdowns**
By sport, market, tier and date range · active and retired model versions

Every figure carries a **date range, sample size and methodology**.

## 4 How to read any betting record

| Ask | Why it matters |
|---|---|
| Date range and sample size | Short samples are mostly luck. |
| Was the price the one you could have bet? | A later, better number flatters a record. |
| Are all losses present? | Hidden losses make any record meaningless. |
| Are live and backtest results separate? | Backtests can overfit and do not predict live results. |
| Is CLV shown with ROI? | Each alone can mislead. |
| Who graded it? | Independent grading beats self-grading. |

**PAST RESULTS NEVER GUARANTEE FUTURE RESULTS**

Even a verified record is not a promise. Most bettors lose money over time and any wager can lose.

**KEY TAKEAWAYS**

- Rules are fixed before any result exists.
- Graded at the published price; nothing deleted; backtests kept separate.
- No results, win rate or ROI are shown until a verified live record exists.
